

# Pam & Mat

The project is located on a plot consisting of two different areas, a constructible surface of 600 m<sup>2</sup> and a classified wooded area. The house is installed at the junction of these two spaces to create a garden in the south and benefit from the view on the woods to the north. On the street side, the garden is horizontal in order to connect with the house interior, with large bay windows allowing in the summer to fully open the living room and kitchen onto the garden. On the wooded side, the house develops on two levels following the topography. This arrangement has allowed to provide an open space including the living room, the kitchen, the parents' bedroom and the children's area opening onto the woods. A two-metal-frame structure, which lean against itself, creating a 17-meter open space that frees the facade from load-bearing points.
